Washington Office of Superintendent of
PUBLIC INSTRUCTION

TABLE OF CONTENTS

EXECUTIVE SUMMARY

In response to House Bill 1577 (2019), the Office of Superintendent of Public Instruction (OSPI) will report data each year related to school district computer science course offerings, student participation, and computer science teachers.

During the 2019–20 school year, an advisory workgroup established a computer science definition for Washington state. The document, _Guidance on Teaching Computer Science in Washington State K–12 Public Schools_, assists schools in implementing computer science courses. The guidance includes the computer science definition, the computer science course codes, and course descriptions to ensure accurate data and report accurate data.

The initial data was collected in the 2019–20 school year and will provide a baseline for tracking student participation in computer science (CS) courses. Because the CS definition and course guidance are new to districts, additional time will be needed to fully implement the reporting process. This data brief is a starting point and is the beginning snapshot of data reported by districts. The data will continue to improve as districts create more opportunities for students to take computer science courses. Although this report focuses only on CS in grades 9–12, future reports will expand to K–12 as data collection and reporting becomes available.

The key takeaways in the data from the 2019–20 school year are as follows:
- Currently, no mechanism exists for elementary schools to report student enrollment data; therefore, the data in this report represents only grades 9–12.
- More than 30,000 students in grades 9–12 were enrolled in over 700 computer science courses during the 2019–20 school year. 24% of the courses were Advanced Placement (AP) or International Baccalaureate (IB) courses.
- Gender representation in computer science courses continues to be disproportionate to the percentage of male (51%) and female (48%) high school students in Washington. Among all high school students taking computer science courses, only 25% are female, compared to 75% male students.
- Participation in computer science varied by students' race and ethnicity.
  - White students represent 53% of students participating in computer science courses, roughly comparable to the state student population of White students (54%).
  - Asian students represented 17% of students participating in computer science courses, a higher percentage than the state population of Asian students (8%).
  - Latino students made up 17% of all computer science students, and represent 23% of all students statewide.
  - Representation for Black/African American students was comparable for computer science (4.3%) and enrollment statewide (4.5%).
  - Representation was similar for students identifying as Two or More Races, with 7% in computer science, and 7.5% enrolled statewide.
  - American Indian/Alaskan Native and Native Hawaiian/Other Pacific Islander populations had the least representation in computer science courses. (Numbers are rounded.)
    - 0.8% of computer science students identified as America Indian/Alaskan Native, compared to 1.3% of students enrolled statewide.

- 0.8% of computer science students identified as Native Hawaiian/Other Pacific Islander, compared to 1.2% of students enrolled statewide.
- 8% of students who participated in computer science courses were students with disabilities, 5.8% were English learners, and 35% were students eligible for free and reduced-price meals. These students are underrepresented among students who enrolled in computer science.
- Computer science teachers were more likely than teachers statewide to hold limited certificates or to be teaching "out of field." They were less likely to be inexperienced (fewer than five years of teaching).
- Of the 476 instructors teaching computer science statewide in 2019–20, the majority (75%) were female, consistent with state demographic data for Washington's teacher population (74.3% female).
- Among the 476 teachers engaged in computer science instruction in 2019–20, the majority (62.4%) held a master's degree. The computer science teacher's master's degree or higher status was slightly higher than the statewide teacher percentage of 60.7%.

INTRODUCTION

House Bill 1577 (2019), enacted to help close the gender gap in computer science fields, required districts to report computer science student participation rates annually to the Office of Superintendent of Public Instruction (OSPI). It also directed OSPI to post a report of data from the previous academic year about district computer science course offerings and participation, including but not limited to the following:

The Legislature found that it is critical to track the gender and other demographic composition of computer science course-takers as well as the specific courses they are taking.

1) The total number of computer science courses offered in each school and whether these courses are advanced placement classes;
2) The number and percentage of students who enrolled in a computer science program, disaggregated by:
   a) Gender;
   b) Race and ethnicity;
   c) Special education status;
   d) English learner status;
   e) Eligibility for free and reduced-price meals; and
   f) Grade level; and
3) The number of computer science instructors at each school, disaggregated by:
   a) Certification, if applicable;
   b) Gender; and
   c) Highest academic degree.
4) The total number of computer science courses offered in each school and whether these courses are Advanced Placement classes.

Computer Science Courses Offered

The detailed list of 2019–20 courses offered by name and district are in **Appendix A**. 726 computer science courses enrolled 30,603 students in grades 9–12 during the 2019–20 school year. 24% of the courses were Advanced Placement (AP) or International Baccalaureate (IB) courses (see Figure 2).

Figure 1: Number of Courses Offered in 2019–20

Student Data

The state's current K–12 student-level data collection system (the Comprehensive Education Data and Research System [CEDARS]) collects course information for grades 9–12. Washington schools serving students in grades 9–12 enrolled 344,128 students in the 2019–20 school year. Of those students, 30,603 enrolled in computer science courses, representing 8.9% of the student population for those grade levels.

Disaggregation of Students by Gender

Gender representation in computer science courses continues to be disproportionate to the percentage of male (51%) and female (48%) high school students in Washington. Among all high school students taking computer science courses, only 25% (7,649) are female, compared to 75% (22,914) male students.

Figure 3: 2019–20 Enrollment by Student Gender

	Female	Gender X	Male
CS Student Count	7,649	40	22,914
State Student Count	166,943	645	176,540
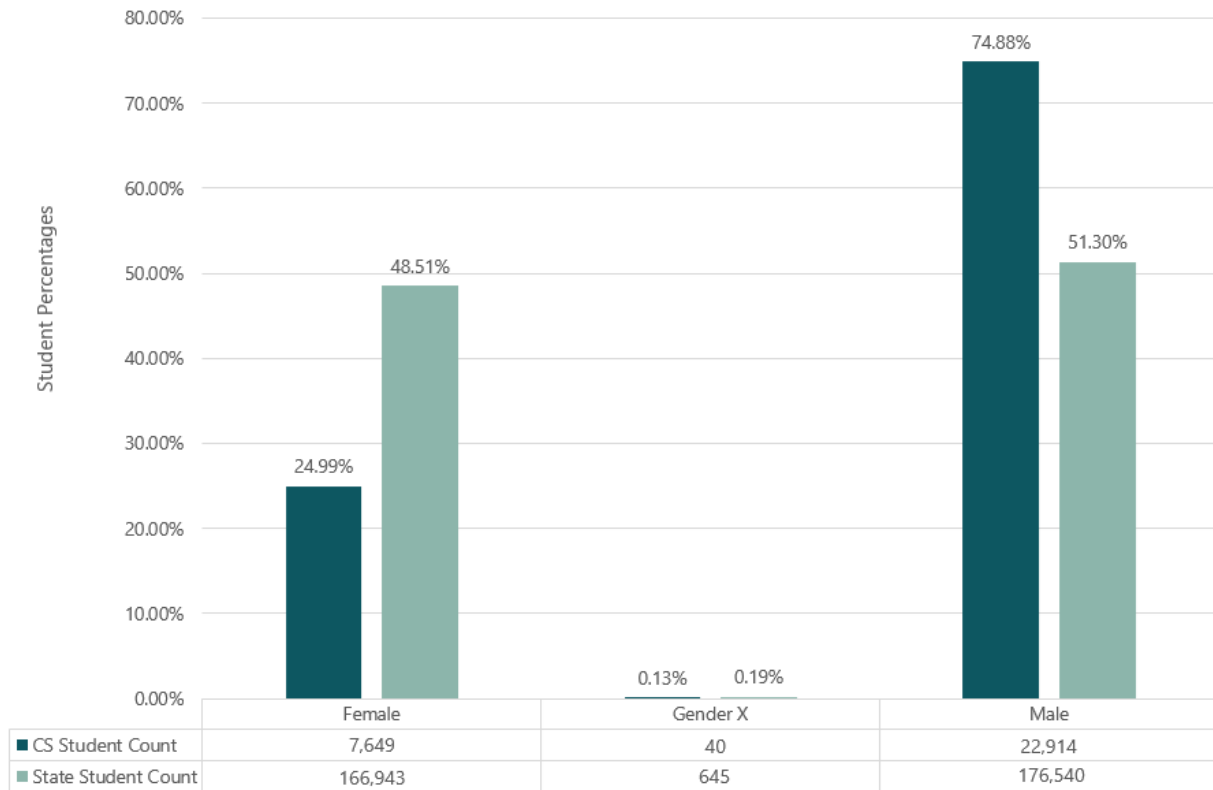

Source: CEDARS, October 1, 2020.

Disaggregation of Students by Race and Ethnicity

Representation for White computer science students (52.9%) is roughly comparable to the state student population (54.3%). Asian students were represented at a higher percentage in computer science (17%) than statewide (8.2%). Latino students made up 17.2% of all computer science students, and 23% of all students statewide. Representation for Black/African American students was comparable for computer science (4.25%) and statewide (4.5%); representation was also similar for students identifying as Two or More Races, 7% in computer science, and 7.5% statewide. American Indian/Alaskan Native and Native Hawaiian/Other Pacific Islander populations had the least representation—0.83% of computer science students identified as America Indian Alaskan Native, and only 1.3% of students statewide; 0.76% of computer science students identified as Native Hawaiian/Other Pacific Islander, and only 1.2% of students statewide. (Numbers are rounded.)

Figure 4: 2019–20 Enrollment by Student Race and Ethnicity

	American Indian/ Alaskan Native	Asian	Black/ African American	Hispanic/ Latino of any race(s)	Native Hawiian/ Other Pacific Islander	Not Provided	Two or More Races	White
CS Student Count	255	5,206	1,301	5,253	234	*	2,153	16,199
State Student Count	4,575	28,211	15,404	79,151	4,002	*	25,900	186,873
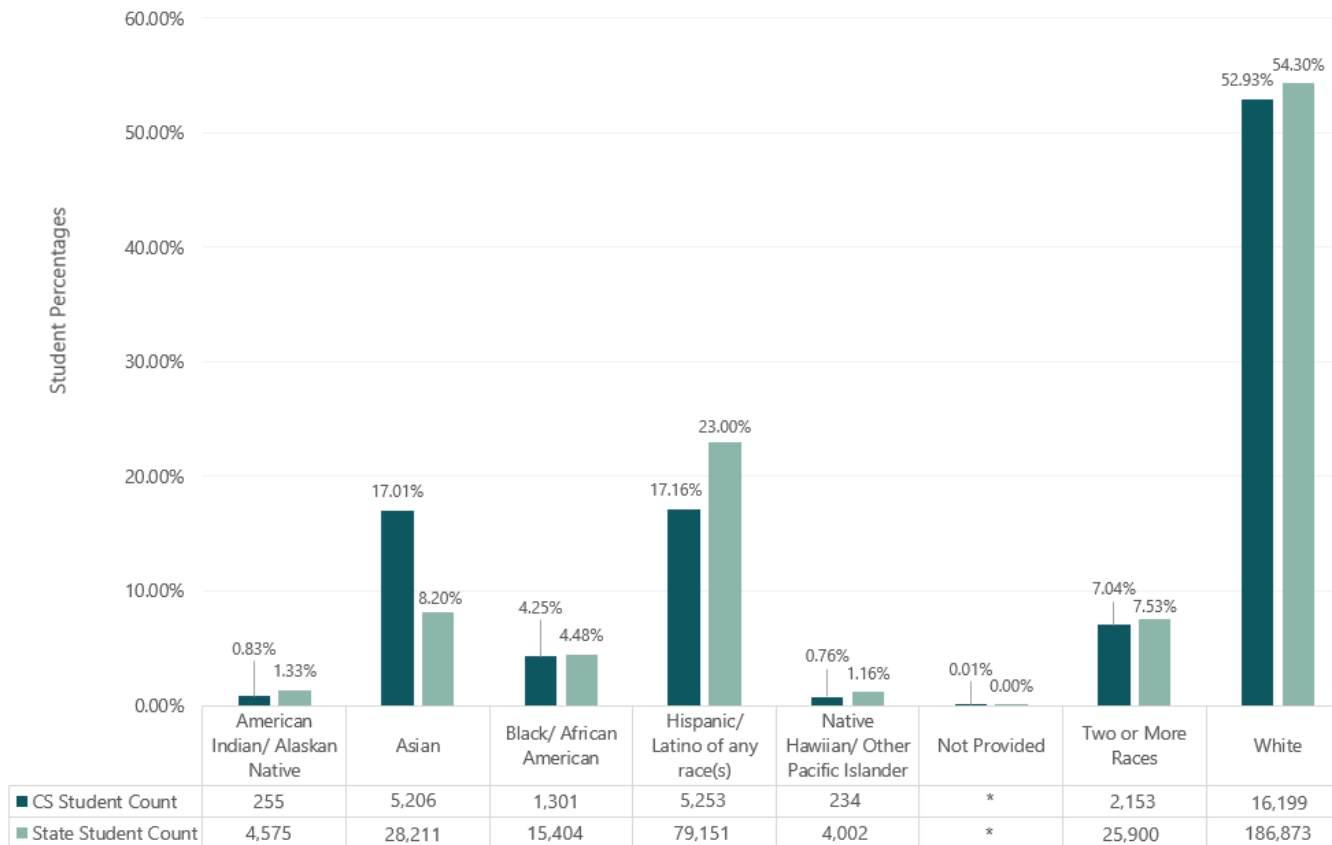

Source: CEDARS, October 1, 2020.[*]

---

[*] Data are suppressed when the count is less than 20 students.

Disaggregation of Students by Special Education Status, English Learner Status, and Eligibility for Free and Reduced-Price Meals

Students with disabilities (8.3%), English learners (5.8%), and students eligible for free and reduced-price meals (35%) are underrepresented among students enrolled in computer science classes. (Numbers are rounded.)

Figure 5: 2019–20 Enrollment by Student Groups

	English Learner	Low-income	Students with Disabilities
CS Student Count	1,768	10,678	2,543
State Student Count	28,358	149,781	43,418

Chart values:
- English Learner: CS Student Count 5.78%, State Student Count 8.24%
- Low-income: CS Student Count 34.89%, State Student Count 43.52%
- Students with Disabilities: CS Student Count 8.31%, State Student Count 12.62%
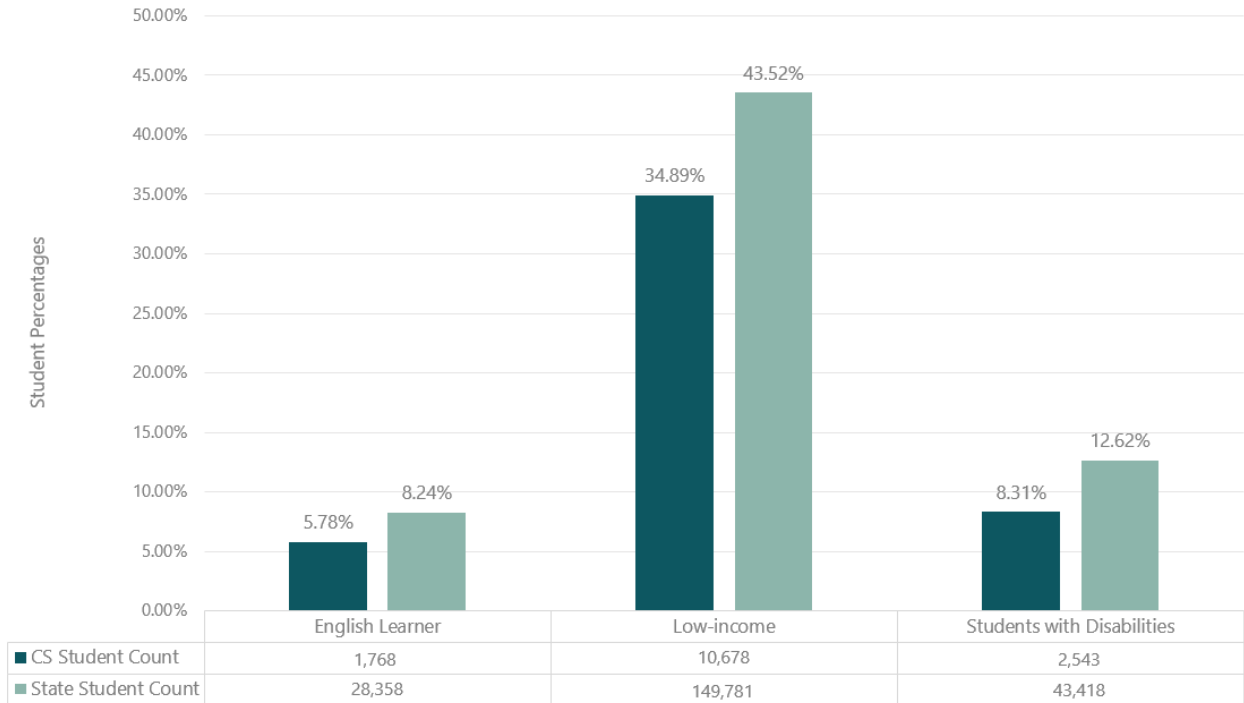

Source: CEDARS, October 1, 2020.

Disaggregation by Grade Level

While state computer science standards allow computer science to be taught at any grade level, most schools offer computer science courses only in one grade level, rather than in a progression across multiple grades.

Currently, no mechanism exists for elementary schools to report student enrollment data related to computer science course-taking. The data in this report represents students in grades 9–12 only. A slightly greater percentage of students enrolled in computer science courses in grades 9 and 12 than in courses in grades 10 and 11.

Figure 6: 2019–20 Student Enrollment in Grades 9–12

	Grade 9	Grade 10	Grade 11	Grade 12
State Student Ct	84,580	85,321	89,257	84,950
CS Student Count	8,966	7,034	7,349	8,802

State Student Ct percentages: 90.38%, 91.76%, 91.77%, 90.49%
CS Student Count percentages: 9.62%, 8.24%, 8.23%, 9.51%
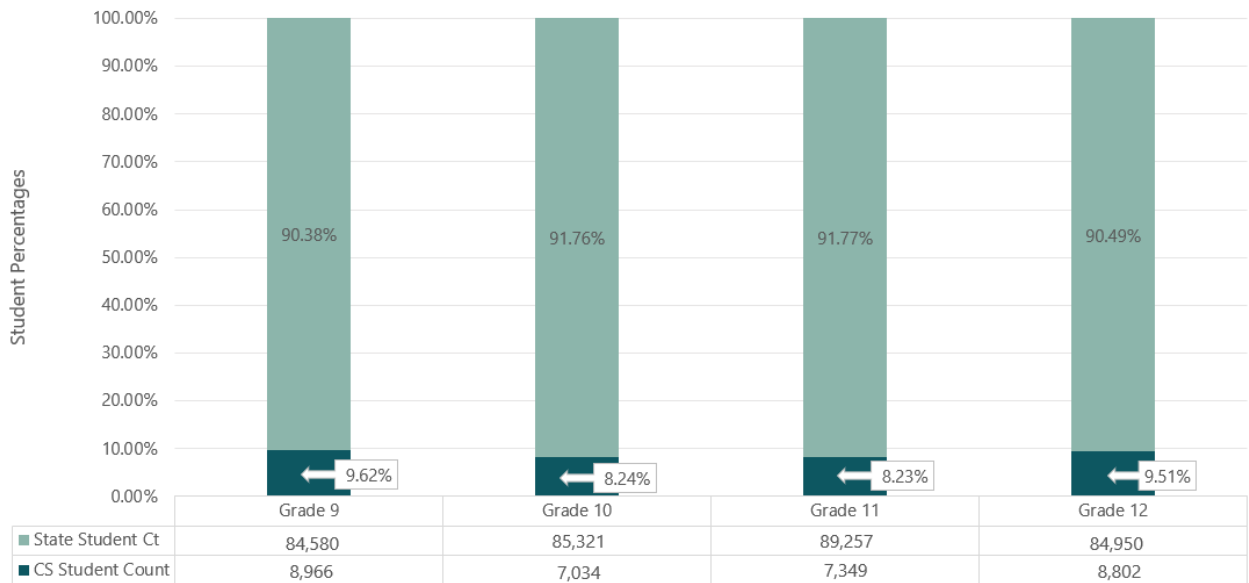

Source: CEDARS, October 1, 2020.

Disaggregation of Teacher Data by Certification, Gender, and Highest Academic Degree

Teacher Certification

Computer science teachers were more likely than teachers statewide to hold limited certificates or to be teaching "out of field," they were less likely to be inexperienced. Figure 7 shows the status of the 476 teachers engaged in 2019–20 computer science instruction. More computer science teachers hold a limited certificate than teachers in all content areas statewide.

Out-of-field status means a teacher taught one or more courses outside of their endorsement area, or outside of grade level that their endorsement is capable of. Limited Certificate status means a teacher taught under a certificate that was initiated by a school district on behalf of the educator because the educator was not eligible for full certification. Inexperienced status means that a teacher had less than or equal to 5 years of teaching experience.

The number of teachers at each school is in Appendix B.

Figure 7: 2019–20 Computer Science Teacher Certification Type

	Out of Field status	Limited Certificate status	Inexperienced status (≤5)
CS Teachers	8.00%	12.00%	22.00%
State Teachers	6.70%	3.20%	30.60%
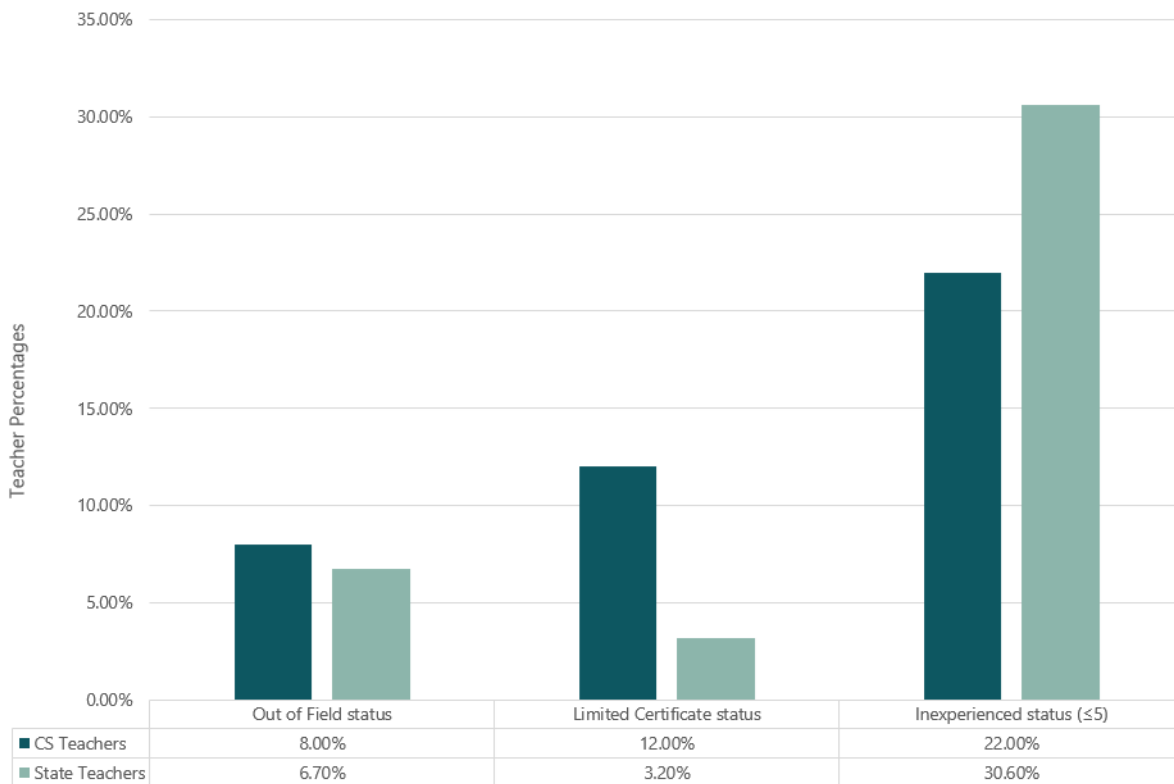

Source: Education Data System (EDS), October 1, 2020.

Teacher Gender

Of the 476 teachers teaching computer science statewide in 2019–20, the majority (75%) were female, consistent with state demographic data for Washington's teacher population (74.3% female).

Figure 8: 2019–20 Computer Science Teachers by Reported Gender

	Female	Male
CS Teachers	75.26%	24.74%
State Teachers	74.30%	25.60%
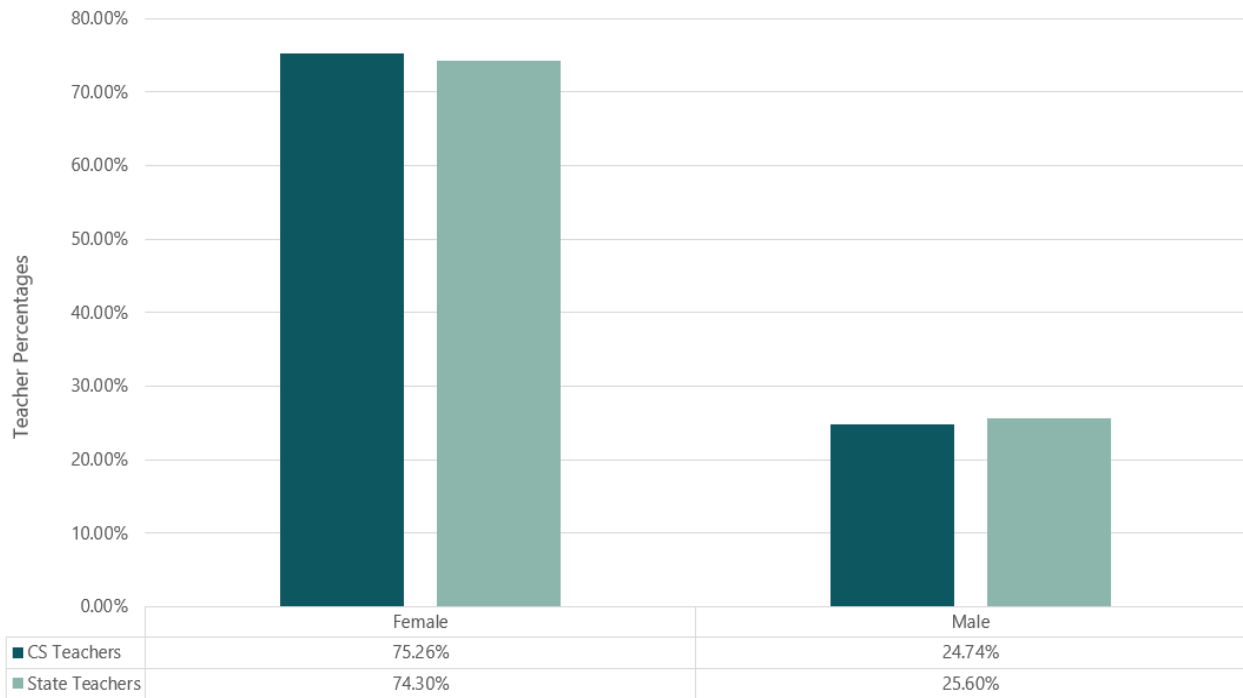

Source: EDS, October 1, 2020.

Teacher Highest Academic Degree

Among the 476 teachers engaged in computer science instruction in 2019–20, the majority (62.4%) held a master's degree. The percentage of computer science teachers with a master's degree or higher was slightly above the statewide percentage of 60.7%.

Figure 9: 2019–20 Highest Academic Degree for Computer Science Teachers

	Master's or above
■ CS Teachers	62.4%
■ State Teachers	60.7%
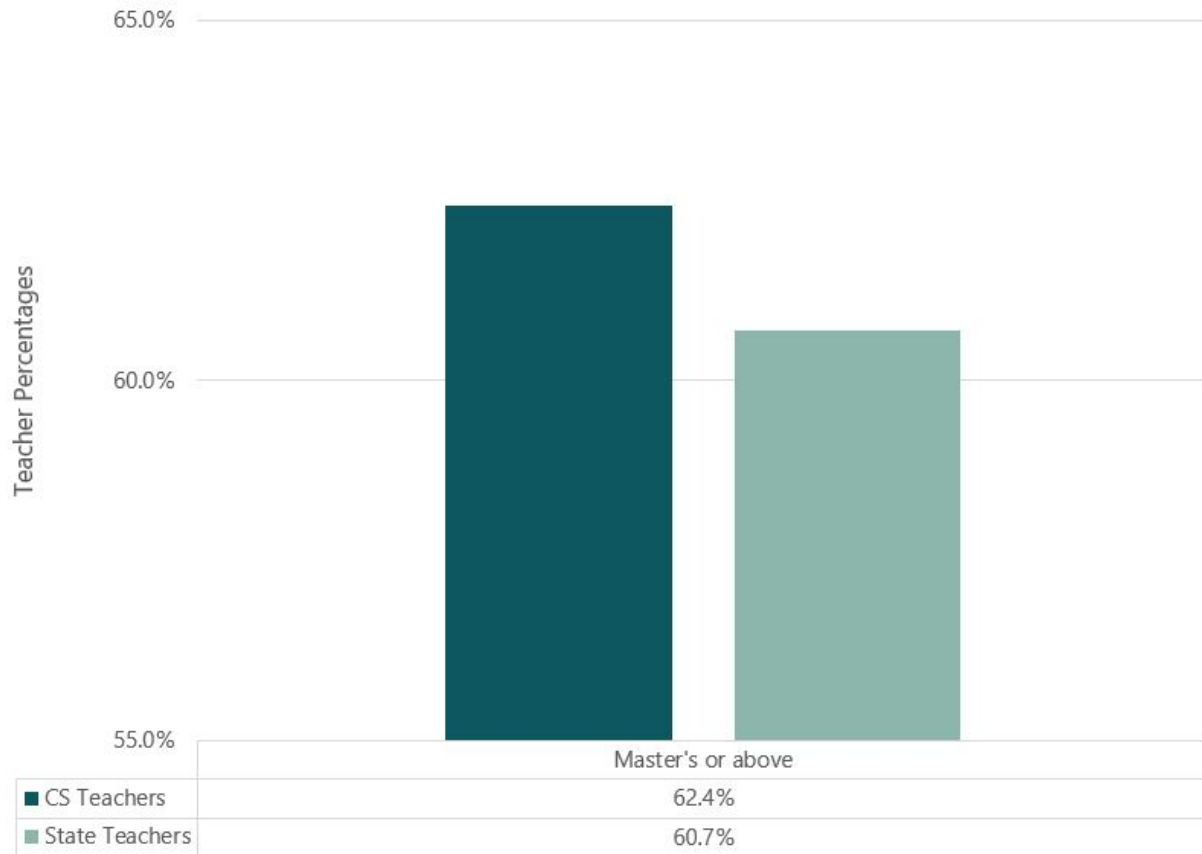

Source: EDS, October 1, 2020.

CONCLUSION & NEXT STEPS

Computer science (CS) is an emerging field of study that leads to high-wage and high-demand careers. It can empower students to be critical users of technology and creators in all fields touched by technology while expressing themselves in the digital world. As all schools begin to offer CS classes in grades K–12, the Office of Superintendent of Public Instruction (OSPI) is committed to understanding the support school districts need to successfully offer CS classes at all grade levels. Due to limitations in the data collection, state understanding is currently limited to students in grades 9–12.

Until all student groups are represented in computer science classes, inequalities will remain. The gender gap in student participation is evident in the data, as are other gaps such as race and ethnicity, and special population participation. Continuing to collect and analyze data around who has access to and participates in computer science courses will help the state and districts develop strategies to reduce barriers to student participation. Understanding more about participation by students in urban, rural, and suburban schools is needed.

Local, state, and national partners can support districts in bringing high-quality CS courses and provide educator professional development. The community can play an integral role in the development and sustainability of a CS program, leading to improved school-to-family communication about partner opportunities, extracurricular activities, and in-school CS pathways. The community can also help inform the CS plan and pathways for college and career readiness, based on local workforce needs.

Professional development is an essential requirement for computer science teachers, especially those new to the subject, teaching out of field, or with limited certificates. A high percentage in one of these qualifications may mean there is a need for more teacher support, mentoring, retention, induction, professional learning, or recruitment.
