K-12 Mathematics Instructional Materials Recommendations

Pursuant to 2007 House Bill 1906 the state Legislature directed Office of Superintendent of Public Instruction (OSPI), in consultation with the State Board of Education (SBE), to recommend no more than three basic mathematics curricula at the elementary, middle and high school levels.

The recommendations serve as a guide to school districts in the state of Washington regarding which curricula are most aligned with the revised K-12 mathematics standards. Please note that OSPI has recommended the math curricula as per the legislated requirement. It is not the role of OSPI to direct which curricula a school district may or should select. It is not a state requirement for any district to specifically use the recommended curricula.

It is important to note that successful mathematics programs may exist with virtually any of the reviewed curricula. While instructional materials matter, other factors contribute to the success of students learning mathematics in Washington State. Those factors include quality of instruction, parent involvement, available supports, and numerous other aspects.

The results of the mathematics basic curriculum reviews is coupled with the results of our recently completed K-12 mathematics supplemental materials review, to build a system of support for districts using any mathematics curricula. These reports can be found at:
