Course Design and Instructional Materials Selection and Adoption Toolkit

Introduction

The importance of carefully crafted course design and the selection of effective instructional materials that are well aligned to Washington State K–12 Learning Standards cannot be overstated.

- District course designs should be regularly reviewed to ensure their ongoing alignment with state law, teaching and learning standards, and research-based best practices.
- Selection and adoption of appropriate instructional materials for all content areas must be well planned and implemented in every Washington district to assure equitable access to high-quality core instruction and, as appropriate, strategic and intensive intervention supports matched to student needs.

It is our hope that this guide serves a twofold purpose:

1. To provide a cyclical strategy for the regular review of courses based on district needs.
2. To provide state policies, guiding questions, useful resource links, and district examples, that will help define best practices for considering instructional materials both for supplemental use by individual teachers and schools and for core-instructional materials for a district.

In many cases, districts may be in the position of knowing for certain they will be adopting new core instructional materials. If that need is a given, districts may spend less time in the initial phases of the cycle or include considerations that are addressed in a later phase earlier in the process. For this specific case, the document tries to call out where those changes might occur.

Please note that core instructional materials adoption process examples for specific content areas are included in the Appendices. These documents include content-specific resources.

The contents of this guide are not all-inclusive or exhaustive in the type of considerations and resources needed to fully implement a system for regular course design. Districts differ throughout the state, and an exact process for one district may not be effective in another. This resource can and should be adapted meet the goals of the district.

This guide is an evolving document. Resources will be added as they come to our attention. District policies and guides with respect to course design and instructional materials selection and adoption are most appreciated.

Course Design is the process that includes identifying and sequencing essential content supporting students’ skill development towards state learning standards. Course design involves providing appropriate instructional materials, professional development, and support systems for teachers as they implement the course.

Instructional Materials include all materials designed for use by students and their teachers as learning resources to help students to acquire facts, skills, and/or to develop cognitive processes. Types of instructional materials include core, alternative core, intervention, supplemental, and temporary supplemental.

These instructional materials, used to help students meet state learning standards, may be printed or digital, and may include textbooks, technology-based materials, other educational media, and assessments. They may carry different licensing types from open to all rights reserved.
Course Design Review Cycle

Gone are the days of the seven-year review cycle. Districts are now recommended to establish a regular cycle of course design review based on student need, updated content, rapidly changing demographics, and funding.  

Phase 1: Identify Parameters
- Identify applicable state laws and federal guidelines - learning standards, graduation requirements, etc.
- Know the rules of the road – gather school board policies related to instructional materials selection and adoption and district procurement procedures.
- Define what an effective course will look like - agree upon success metrics and reporting tools.
- Understand your district capacity with regards to budget, time, staff, and technology.
- If a core instructional material’s adoption is pending, much of the initial planning for the effort may be done during this phase.

Phase 2: Analyze Existing Course Design and goals
- Understand where are you currently – consider effectiveness of course design and alignment of instructional materials to state learning standards by analyzing student data, soliciting input from teachers, and leveraging existing instructional materials reviews.
- Based on the assessed needs, consider your options. Choices will fall along a spectrum that includes a minor instructional materials refresh, selecting appropriate instructional materials to fill gaps, or a complete course overhaul.
- If a core instructional material’s adoption is pending, assemble the instructional materials review team and develop your communications strategy.

Phase 3: Review and Select Instructional Materials
- Know your district needs – consider student population, technology capacity, professional learning strategy, district educational priorities and goals
- Search critically
- Review with recognized rubrics for the evaluation of instructional materials
- Understand your level of permitted use

Phase 4: Implement Course and Assess Effectiveness
Repeat cycle on based on student need, changing demographics, and funding
Phase 1: Identify Parameters and Gather Resources

*Where do we need to go?*

Effective planning and gathering the current laws and requirements are essential when considering instructional materials and supports for your district courses. Below are key elements to identify and links to resources that districts may find helpful.

If a core instructional materials adoption is pending, much of the initial planning for the effort may also be done during this phase.

**Laws and Requirements**

Make sure district is adhering to applicable Washington state laws and Federal guidelines:

- legal requirements for school instructional materials selection
- course graduation requirements
- federal accessibility requirements
- professional learning requirements

Legal requirements for district selection and approval of instructional materials | Revised Code of Washington (RCW) 28A.320.230

Textbooks and instructional materials—Instructional materials policy—Elimination of bias | Washington Administrative Code (WAC) 392-190-055

District school directors’ responsibilities | RCW 28A.150.230

Regulations, guidelines to eliminate discrimination | RCW.28A.640.020

Tribal history and culture | RCW 28A.320.170

High School Civics Course - RCW 28A.230.094

Basic education - Goals of school districts | RCW 28A.150.210

Basic education - Minimum instructional requirements | RCW 28A.150.220

Professional learning | RCW 28A.300.600

Washington State Graduation Requirements | OSPI

Graduation in Washington Toolkit | OSPI

Multiple Pathways to Graduation | OSPI

Special Education Resource Library | OSPI

Roles and Responsibilities for Course Design and Instructional Materials Selection and Adoption — [doc](#) and [pdf](#) | OSPI
Washington State K–12 Learning Standards and Guidelines

Content-specific state laws may be found on the web page for each content area.

Content areas in the Basic Education Act where standards must be taught:

- The Arts
- English Language Arts
- Health and Physical Education
- Mathematics
- Science
- Social Studies

Content areas that relate to the goal in the Basic Education Act that schools must integrate technology literacy and fluency and understand the importance of work and finance:

- Computer Science
- Educational Technology
- Financial Education

Districts must implement the related learning standards in any stand-alone educational technology, computer science, environment and sustainability education, or financial education courses.

Standards form additional content areas not named as a primary goal in Basic Education Act must be integrated to the maximum extent possible. See RCW 28A.655.070

District Policies

Know the rules of the road. Gather school district policies for:

- instructional materials selection and adoption
- ownership of teacher-created content
- use of open educational resources
- district procurement/acquisition procedures

School board policy on instructional material selection and adoption

Model Policy: Course Design, Selection, and Adoption of Instructional Materials | Washington State School Directors’ Association (WSSDA)

District policy with regard how to handle teacher-created content

Model Policy: Course Design, Selection, and Adoption of Instructional Materials | Washington State School Directors’ Association (WSSDA)

Model Policy: Copyright and Open Licensing Policy — pdf | OSPI

District procurement procedure for core instructional materials.

Consider any guidelines/restrictions/impacts for print, digital, blended, or Open Educational Resources (OER).

OER Considerations for School Districts — pdf | OSPI OER Project
**Success Indicators/Metrics**

Based on district educational goals for success, define what an effective course will look like. Identify and agree upon indicators of success, monitoring tools, and reporting process.

Consider:
- professional learning
- equitable delivery of quality content to ALL students

- [Health and Fitness](#)
- [Education Technology](#)

District benchmarks or assessments
Teacher performance assessments and observations

**Teacher/Principal Evaluation Program | OSPI**

---

**If your district is certain that new core-instructional materials will be chosen:**

Begin the planning process for a formal instructional materials review and adoption process outlined in **Phase 3: Select and Adopt Core Instructional Materials**

This course of action SHOULD NOT happen every time you review your district course design.
Phase 2: Analyze Existing Course Design

Where are we now?

Course designs should be evaluated, adapted and developed on a continuing basis to determine if your instructional materials across the spectrum from supplemental resources to core instructional material meet student needs.

Though not always possible, a comprehensive review of kindergarten through grade 12 course design and instructional materials is the most effective and thorough approach to curriculum improvement. An advantage to a K–12 approach is to bring coherence to district efforts for overall school improvement by encouraging vertical and horizontal alignment of standards, instruction and assessment across the system.

Course Design Committee

Assemble a team to examine the alignment to Washington State Learning Standards and effectiveness of existing course design.

A course design committee could consist of:

- district curriculum director
- teachers and data coaches
- as appropriate, external content area expert

Current Data

Look at current data to identify current course strengths and challenges

Washington State Report Card | OSPI
District level assessments
Interim assessments for Smarter Balanced

Survey Stakeholders

Solicit teacher feedback on current material alignment, effectiveness, and fidelity.

Content Area Need Survey — pdf | Washougal School District
Student Survey of Curriculum and Learning pdf | Mead School District
## Assess Instructional Material Needs

If there is agreement that there is an identifiable need for new instructional materials (based on data, committee examination, and teacher feedback), assess the gap between where the district/school is currently and where they need to be to meet state and district goals.

Document the process for analysis of existing course design and communicate the need to district stakeholders.

<tbody>
<tr>
<td>Existing instructional materials are out-of-date, not aligned with standards, and ineffective tools for students and teachers. A new option is required.</td>
</tr>
</tbody>
</table>
Phase 3: Select and Review Instructional Materials

How do we get there?

There’s a growing body of research finding that instructional materials can have as large an impact on student outcomes as teacher quality or reduced class size (see Research Links below). Because of this, it is important to help provide guidance to state, district, and school level leaders in the selection of instructional materials that are aligned to standards, address education goals and are accessible for all students.

Today’s instructional materials include resources delivered via different methods and carrying different types of licenses outlining permitted use. Remember that the criteria used to judge quality and alignment to state learning standards needs to be the same, regardless of whether the materials are print or digital, open or all rights reserved copyright.

For the purposes of this document, we’ll be focusing resource suggestions towards the goal of selecting and adopting new core instructional materials; however you will find the section on review instruments useful for supplemental resource selection as well.

Definitions

**Instructional Materials** are all materials designed for use by students and their teachers as learning resources to help students to acquire facts, skills, and/or to develop cognitive processes. These instructional materials, used to help students meet state learning standards, may be printed or digital, and may include textbooks, technology-based materials, other educational media, and assessments. They may carry different licensing types from open to all rights reserved.

**Core Instructional Materials** are the primary instructional resources for a given course. They are district-approved and provided to all students to help meet learning standards and provide instruction towards course requirements.

**Alternative Core Materials** are the primary instructional materials for a given course that are used with a subset of students. These materials are intended to replace approved core materials and may be used for specialized course offerings or flexible learning environments.

**Intervention Materials** are designed to support strategic or intensive intervention for students who are at risk of not meeting established learning standards. Intervention materials are used with students to accelerate progress toward particular learning goals based on systematic assessment, decision-making, and progress monitoring.

**Supplemental Materials** are used in conjunction with the core instructional materials of a course. These items extend and support instruction. They include, but are not limited to, books, periodicals, visual aids, video, sound recordings, computer software and other digital content.

**Temporary Supplemental Materials** are those items used in conjunction with the core instructional materials of a course that are of interest or value for a short period of time and are chosen within district-established guidelines.
Select and Adopt Core Instructional Materials

Understand District Needs and Capacity

Establish district learning goals – quality criteria beyond alignment to state learning standards. Some potential areas to consider:

- Equitable delivery of quality content to ALL students. Consider your teacher and student demographics and identify any specific instructional material considerations.
- Teaching behaviors your district has defined as important and that instructional materials need to support.

Technology considerations if used to deliver content (e.g. student access to devices and internet in school and at home).

District comfort level with pulling together resources to create their own course curriculum? Availability of appropriate material available?

Determine if piloting or field testing is advisable

District capacity to provide professional learning opportunities. Consider teacher experience level and union contract’s position about materials and professional development around curriculum/instructional materials.

Material Adoption Tips from Washington districts — pdf

Material Adoption Tips from OSPI — doc and pdf
Identify and Engage Stakeholders

Define roles and responsibilities of stakeholders impacted by instructional materials selection and adoption.

Craft a communications strategy that outlines goal, purpose, and timeline to key stakeholders within district, within community, within review team, and across instructional materials developers.

Assemble an Instructional Materials Review Committee (IMC)

Select a diverse team that can evaluate the material through different lenses.

Develop a collective understanding of the process with the team of reviewers.

Build solid understanding and calibrate around what good instructional materials look like prior to beginning review.

Survey Stakeholders

Obtain feedback from teachers and students on their needs and wants in a new core instructional material.

doc and pdf | Fife School District/Student Achievement Partners

Sample ELA Instructional Material Teacher Survey
doc and pdf | Fife School District/Student Achievement Partners
### Determine Review Instruments

Define the instructional materials options that will meet your district need.

Determine what rubrics and review instruments will be used to make the final selection.

Establish acceptance criteria for instructional materials.

<table>

</tr>
</tbody>
</table>

### Train the Instructional Materials Review Committee

Build an understanding of the content-specific Washington State Learning Standards.

Define the instructional practices that your district has identified as important and that the instructional materials need to support.

Understand the IMET and/or EQuIP review process.

<table>

Obtain Materials to Review

Clarify what you want

- Be specific about materials, professional development, etc., the publishers/developers need to provide
- Determine tech specs if applicable

If appropriate, build in time to provide guidance prior to developers submitting materials (may be combination of RFP or other formal document along with webinar or other opportunity for publishers to ask questions, etc.)

Direct publisher contacts

Openly licensed options for district adoption consideration (ELA, mathematics, science) | OSPI OER Project
Vendor Technology Checklist
doc and pdf | Puyallup School District

Conduct Review

Establish regular meetings of review committee

Assign reviewers material review assignments and due date

Clarify reporting procedure and arbitration pathway if reviewers disagree on scores.

In addition to the review of the full core instructional material, have a team from each grade review a selected unit from each curriculum using the EQuIP review process.

Report progress with stakeholders as decided upon in communication plan

Final Recommendations and Reporting

Generate documents to communicate process.

Document reviewer results and metrics used to identify recommended curriculum.

Communicate recommendations and next steps to key stakeholders (teachers, parents, district admin, principals, IT, etc.)

Present to Instructional Materials Adoption Committee and/or school board and follow your district procurement process to obtain materials.

District procurement/acquisition procedures

Acquisition Policies for Washington | SETDA
Create an Implementation Strategy

Consider initial resource training, sustained professional learning, and resources and strategies to help families support students with their learning.
