Open Educational Resources (OER) are teaching and learning materials that are free to use, adapt, and share in order to better serve all students.

As more districts develop or adapt OER, we have a tremendous opportunity to share resources across districts via our OER Commons Washington Hub - promoting equitable access to standards-aligned, quality instructional materials. This program is in support of that goal.

Below are the recipients of the OSPI OER Project Grant for the 2020–2021 school year.

In choosing our grantees for this year, priority consideration was given to projects that integrated content or addressed areas currently lacking in standards aligned OER. Additionally, consideration was given to projects developing resources that could be delivered remotely or in a blending learning environment.

**BATTLE GROUND PUBLIC SCHOOLS**

**High School Comprehensive Sexual Health**

Battle Ground district staff, teachers, representative community members and parents will develop a new Comprehensive Sexual Health (CSE) curriculum and instructional resources for grades 9-12, aligned with Washington State Learning Standards.

The curriculum will cover all topics in CSE but do so with a style that is moderate in approach, finding common ground from those on both sides of sex education issues while still maintaining medical accuracy and a scientific foundation. As an open resource, these materials will allow other school districts to use or adapt it as needed, to impact sex education in their districts.
EDUCATIONAL SERVICE DISTRICT 112
Regional STEM Instructional Materials Collaborative

For the 2020-2021 school year, the project will be focused on providing teachers with high quality STEM instructional materials that can be implemented while schools are functioning with a blended model of instruction due to partial school reopening.

The focus of the Fall semester will be to create OER instructional materials that have components that can be used both by teachers and by families. Teacher support materials will help educators use virtual tools to engage students in phenomenon-driven instruction. Family-facing activities within the unit will leverage the home environment and provide interesting and engaging activities that be easily implemented at home.

SEATTLE PUBLIC SCHOOLS
Dual Language Social Studies OER Project

The Seattle Schools Dual Language Social Studies OER project will provide opportunities for a team of dual language teachers to identify, translate, and align resources in Spanish, Japanese and Mandarin to be used in middle school dual language social studies classes, as well as in the new and developing high school social studies courses.

These resources will be developed and implemented with an emphasis on using culturally relevant strategies and strategies for supporting language learners with complex grade level texts.

SOCIETY OF HEALTH AND PHYSICAL EDUCATORS--SHAPE WASHINGTON
Teaching Games for Understanding (TGfU): A Physical Education Approach

This project will provide unit plans to teach invasion and net games using the TGfU instructional model. The TGfU model uses a modified game-practice-modified game approach which encourages students to develop critical thinking skills as they make connections between the skills needed to perform the proper tactic used in the modified game.

The lesson plans and assessments for each unit will encourage students to become more physically literate as they develop the competence and confidence to participate in sports throughout their lifetime.
Tacoma Public Schools will gather a team of World Language teacher leaders, instructional facilitators, and instructional technology staff to create six supplemental instruction OER units, levels 1 and 2 for secondary French, Spanish, and Korean.

Successful units previously developed by this team will be adapted for a blended learning model flexible for synchronous and asynchronous online delivery as well as in-person instruction. Units will be based on state learning standards for World Language, be performance-based, and assess students’ proficiency using ACTFL Proficiency Standards. This project addresses the statewide need for resources designed for a blended learning model and prepares Washington students for success in an ever-increasing globalized society.

Thorp School District, in cooperation with members of the Yakama Nation and Kittitas Band Elders, will put together Social Studies instructional materials that can shed light on the contributions of local stakeholders (groups, tribes, etc.) while also engaging students in a practice of analyzing and recording oral history through interviewing local tribal members.

Tribal elders, historians, and cultural experts will gather in order to understand how ethnogeography affected local tribes. Developed from this partnership will be a series of grade-level OER lesson plans that have embedded in them pictures, maps, oral histories, treaty rights, and tribal cultural perspectives that will meet Washington State Content Standards in Social Studies and English Language Arts but more importantly connect to the Since Time Immemorial: Tribal Sovereignty in Washington State lessons.
WASHINGTON CENTER FOR DEAF AND HARD OF HEARING YOUTH

Financial Literacy Videos

The dynamic environment of the American economy requires in depth knowledge to achieve personal financial success. Deaf and hard of hearing students and families are at a material disadvantage due to limited access to financial education material in their first language (American Sign Language).

This project will produce a series of financial literacy videos for students, families, and teachers with content delivered in American Sign Language by a native deaf speaker (and captioned for full access). Video content will be made available free of charge as an open education resource available for both remote classroom instruction and home viewing.
