

Rationale and Description for the COVID-19 Student Survey: Impacts and Implications on Student Learning and Well-being

Welcome. Thank you for your interest in the COVID-19 Student Survey. This survey was created in an effort to collect student perception data to help school leaders in their end-of-year planning and student support programming, as well as information to aid in fall 2022 planning.

The COVID-19 Student Survey was created by the Office of Superintendent of Public Instruction (OSPI) and the Psychiatry & Behavioral Sciences in the University of Washington School of Medicine (UW) to help capture the thoughts, feelings, and behaviors of students during the COVID-19 pandemic.

During this time, students have had to adjust to new ways of learning, socializing, and living. The purpose of this survey is to help teachers, school leaders, parents, community partners, and policy leaders understand how they can better help meet the needs of their youth.

This survey asks questions about mental and physical health, hope, social support from peers and adults, and thoughts and feelings pertaining to school during the COVID-19 pandemic and COVID-19 precautions.

Participation is free for schools. The survey is anonymous, voluntary, and will be administered to students in grades 6 to 12.

The survey will be administered completely online through the school and can be done in a school building or from home for students participating in remote learning.

Survey results will be shared in April 2022.

If you have questions about the survey, please contact contact@wacovidstudentsurvey.org.
